

Six-Phase Consulting Framework

By Netlogic Computer Consulting

netlogiccomputer.com

Netlogic Computer Consulting provides strategic IT consulting services designed to help organizations make confident, informed technology decisions. Our approach goes beyond tools and platforms. We focus on understanding your business, aligning technology with your goals, and building a clear path forward.

This guide introduces our Six-Phase Consulting Framework, a structured yet flexible approach that ensures every engagement begins with clarity and ends with measurable impact. From assessing your current environment to guiding long-term optimization, our consulting services are built to support smarter decisions, stronger systems, and sustainable growth.

Whether you are planning a major initiative, modernizing your infrastructure, improving security posture, or aligning leadership around technology direction, this framework outlines how we partner with you at every step.

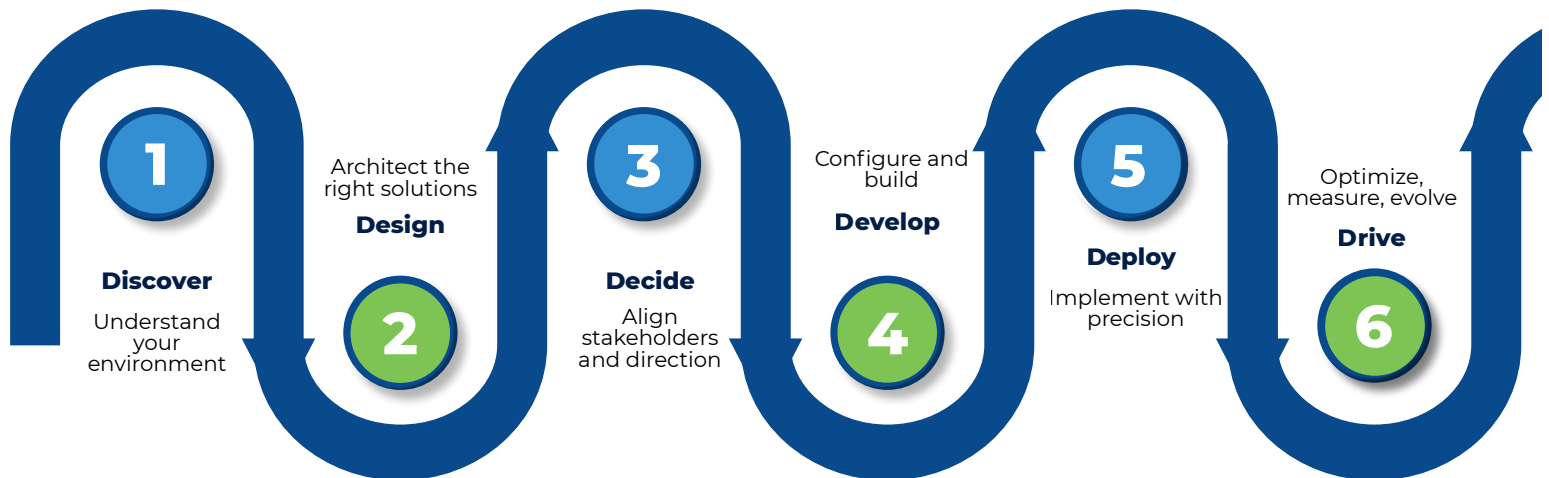

Our Six-Step Framework

An overview of our consulting process

We partner with you to deeply understand your business – your culture, your customers, your challenges, and your aspirations. With that insight, we design solutions that are tailored to your unique needs and goals.

An overview of our six-step framework:

The following pages break down each of the framework steps in detail:

1. DISCOVER

Every successful consulting engagement begins with clarity.

During the Discover phase, we take time to understand your environment, goals, challenges, and technology landscape.

This includes:

- ▶ Stakeholder conversations
- ▶ Environment and infrastructure review
- ▶ Security and compliance evaluation
- ▶ Workflow and collaboration analysis
- ▶ Technology maturity assessment

The result is a clear understanding of where your organization is today and where technology can create meaningful improvements.

2. DESIGN

Turning insight into a strategic roadmap.

After gaining a deep understanding of your organization, we design solutions that align technology with business priorities.

This includes:

- ▶ Architecture planning
- ▶ Platform selection and configuration strategy
- ▶ Security and governance design
- ▶ Workflow and collaboration structure
- ▶ Long-term technology roadmap

Our goal is to ensure every technology decision supports operational goals and future growth.

3. DECIDE

Aligning leadership around the right path forward.

Technology decisions often involve competing priorities, budget considerations, and operational impact. In this phase, we help organizations evaluate options, clarify tradeoffs, and build alignment around the best path forward.

This includes:

- ▶ Solution evaluation and comparison
- ▶ Strategic planning discussions
- ▶ Risk and cost analysis
- ▶ Implementation planning

The result is confident decision-making supported by expert guidance.

4. DEVELOP

Building the technology environment.

Once the direction is clear, we move into development and configuration.

This includes:

- ▶ Environment configuration
- ▶ Platform deployment
- ▶ Security implementation
- ▶ Workflow development
- ▶ Integration of tools and systems

Our focus is building systems that are secure, scalable, and aligned with how your organization operates.

5. DEPLOY

Implementing solutions with minimal disruption.

Deployment focuses on introducing the solution into your organization smoothly and effectively.

This includes:

- ▶ System rollout and migration
- ▶ User onboarding and adoption support
- ▶ Documentation and training
- ▶ Change management support

The goal is ensuring the technology works not just technically – but operationally.

6. DRIVE

Ensuring long-term success and continuous improvement.

Technology implementation is only the beginning. In the Drive phase, we help organizations measure success, optimize workflows, and continue evolving their technology environment.

This includes:

- ▶ Performance monitoring
- ▶ Security optimization
- ▶ Workflow improvements
- ▶ Ongoing advisory support
- ▶ Future planning

Because the real value of technology comes from how it evolves with your organization.

Thank you for taking the time to explore Netlogic's Six-Phase Consulting Framework. Thoughtful technology decisions require clarity, alignment, and trusted guidance. Our consulting services are designed to help organizations navigate complex challenges, make informed decisions, and ensure technology investments deliver meaningful results.

If you are planning a technology initiative or would like to discuss how this framework applies to your organization, please contact us to schedule a consultation to discuss your goals and next steps.
